

FASD Prevention & Health Promotion Resources

Resource Directory

September 2017

In the spirit of respect, Menzies School of Health Research acknowledges the people and the elders of the Aboriginal and Torres Strait Islander Nations who are the traditional owners of the land and seas of Australia.

Where the term Indigenous is used throughout this manual we include all Aboriginal and Torres Strait Islander people and acknowledge their rich traditions and heterogeneous cultures.

Acknowledgements

The FASD Prevention and Health Promotion Resources Project Team would like to thank those who contributed to this project, particularly staff, management and board members from New Directions Mothers and Babies Services. This directory of resources and the associated training package is based on the FASD Prevention Program developed in 2008 by Jane Cooper and Jenni Rogers from Ord Valley Aboriginal Health Services (OVAHS) and supported by the OVAHS Management and Board. The project partners, Menzies School of Health Research, OVAHS, National Aboriginal Community Controlled Health Organisation (NACCHO), and the Telethon Kids Institute (TKI) gratefully acknowledge the funding received from the Australian Government Department of Health (2015-2017) for the development of the FASD Prevention and Health Promotion Resources Package.

Introduction

This Resource Directory, and complementary training modules, form the FASD Prevention and Health Promotion Resources (FPHPR) Package. The overall aim of the FPHPR Package is to enable health services to develop and implement community-driven strategies and solutions to reduce the impact of FASD. The resources in the Package focus mainly on preventing and reducing alcohol consumption during pregnancy, however there are also resources on smoking and substance misuse during pregnancy and contraception and family planning options. While the intended audience for the Package includes health professionals working with Aboriginal and Torres Strait Islander communities, the content is also relevant to those working with other communities.

The initial online search was conducted in 2015 and was repeated in 2017. Key words were used to search several platforms: 1) the Australian Indigenous HealthInfoNet, 2) relevant organisational websites, 3) grey literature databases, 4) Google search engines and 5) consultation with experts in relevant fields. The inclusion criteria outlined below were used to identify current and culturally appropriate resources for inclusion in the FPHPR Package. Following the updated search in 2017, all copyright owners of the eligible resources were contacted to seek permission to include their resources in the FPHPR Package. Therefore resources may not be included in this directory for several reasons, including: 1) not meeting inclusion criteria, 2) no longer available at the time of the final review and 3) copyright agreements were not able to be obtained.

Inclusion criteria:

1. The resource is written in English.
2. The resources is publically available online or able to be ordered online.
3. The resource primarily provides information on one of the following topics:
 - FASD prevention
 - Alcohol, tobacco or other drug use during pregnancy
 - Family planning and contraception
4. The resource is of use or benefit to one of the following key groups:
 - Pregnant women
 - Women of childbearing age (15-45 years of age)
 - Grandmothers and Aunties (a term used to dignify Aboriginal Australian female Elders)
 - Men, fathers, partners
 - Other health professionals
5. The resource aims to fulfil one of the following purposes:
 - Educate or raise awareness of:
 - The risks of FASD and alcohol consumption during pregnancy
 - The risks of tobacco use during pregnancy
 - The risks of drug use during pregnancy
 - Family planning and contraception options
 - Planning or evaluating evidence-based interventions
 - Encourage behavioural change
 - Outlining solutions to potential barriers in FASD prevention.
6. The resource is culturally appropriate for use among Aboriginal and Torres Strait Islander people.
7. The resource adheres to the current Australian Guidelines to Reduce Health Risks from Drinking Alcohol (National Health and Medical Research Council, 2009).
8. The resource adheres to the current Clinical Practice Guidelines: Antenatal Care – Module 1 (Commonwealth of Australia, 2012).
9. The resource complies with the diagnostic categories for FASD and terminology outlined in the Australian Guide to the diagnosis of FASD (Bower & Elliott, 2016).

Contents table

The FASD Prevention and Health Promotion Resources in this document are categorised by their purpose and the population groups for whom they are intended. In the table below, select your population group of interest and the type of resource, and then click on the hyperlink to be directed to a table displaying all of the available resources for your search. An x indicates that no resources are included for this category.

Anyinginyi Public Health Unit			grandmothers and Aunties, and men.	This short film uses puppets as characters to deliver a strong message about Fetal alcohol spectrum disorder (FASD) and the risks of drinking during pregnancy. It was written and performed by the people of Barkly, Northern Territory. The film follows the story of Mathias, a seven year old boy living with FASD in Tennant Creek, Northern Territory. His mother is pregnant and wants to make sure the new baby does not have FASD like Matias. The video follows the challenges families can face when it comes to alcohol and pregnancy.

	breastfeeding (2012)			This resource is part of the Growing strong: feeding you and your baby set of resources from Queensland Health. The booklet discusses why alcohol, tobacco and other drugs (legal and illegal) should be avoided during a woman's pregnancy and the breastfeeding of her baby. It outlines the health risks to both the mother and developing baby. In addition, it highlights the harmful effect of family and friends smoking near a pregnant woman. It delivers a powerful message in a clear and easy to understand way. Brochures are available in hard copy to services across Australia, or downloadable as a PDF.

The Australian Government NHMRC	Australian Guidelines to reduce health risks from drinking alcohol (2009)	Guidelines	Health professionals	<p><u>Free to download:</u> http://alcoholthinkagain.com.au/Portals/0/documents/publications/Resourses%20for%20Health%20Professionals/Nhmrc-Guidelines.pdf</p> <p><u>Focus:</u> Mainstream with Indigenous elements.</p> <p><u>Summary:</u> In 2009, the National Health and Medical Research Council (NHMRC) introduced revised guidelines that depart from specifying 'risky' and 'high risk' levels of drinking. The guidelines seek to estimate the overall risk of alcohol-related harm over a lifetime and to reduce the level of risk to one death for every 100 people. There is no longer any difference in the guidelines based on gender; the guidelines are universal for adults over 18 years (Guidelines 1 and 2). Specific guidance is also provided for children and young people (Guideline 3), and pregnant and breastfeeding women (Guideline 4).</p> <ul style="list-style-type: none"> - Guideline one: to reduce the lifetime risk of harm from alcohol-related disease or injury, no more than two standard drinks should be consumed on any day - Guideline two: to reduce the risk of injury on a single occasion of drinking, no more than four standard drinks should be consumed - Guideline three: recommends that children under 15 years are at the greatest risk of harm from drinking and that for this age group, not drinking alcohol is especially important. For young people aged 15-17 years, the safest option is to delay the initiation of drinking for as long as possible - Guideline four: recommends for women who are pregnant, 	Australia

Corporation				<p><u>Summary:</u> This video depicts the impact of European settlement, the damage to people and culture that has resulted and the challenges for many Aboriginal people of a changing environment. It proposes a solution - living change - whereby Aboriginal people accept responsibility for their future, capitalise on their abilities and, with help, learn to 'swim the river' and prosper from the opportunities that exist across the region and beyond.</p>
